Wenfeng Wang

Philadelphia, PA · fw93810@engineering.upenn.edu · fw93810.github.io

Education

University of Pennsylvania Philadelphia, PA
M.S.E. in Electrical Engineering GPA: 3.72/4.00 *Aug 2025 – May 2027 (expected)*
- Coursework: Machine Learning, Graph Neural Networks, Statistics for Data Science, Digital Integrated Circuits & VLSI, Artificial Intelligence*, Linear Systems Theory* (*in progress)

Jilin University Changchun, China
B.S. in Physics GPA: 3.80/4.00 *Sep 2020 – Jul 2024*
- Coursework: Electrodynamics, Quantum Mechanics, Thermal Physics, Mathematical Analysis, Linear Algebra, Probability

Publications

[1] **Wenfeng Wang**, Jianrui Shi, Mingang Guo, Jiayuan Ma, Yuqi Lu, Jiajun Sun, Guojiang Zhao, Jing Li. Trace-to-Architecture: Capability Bottleneck Diagnosis for Harness Revision. *arXiv preprint* arXiv:2610.16725, 2026. Under review at ACL Rolling Review.

[2] **Wenfeng Wang**. The Design and Optimization for 4-Bit Absolute Value Comparator in Voice Signal Processing. Accepted for conference proceedings, 2023 (not yet published).

[3] **Wenfeng Wang**. The Introduction of Design and Research about PeLED. Accepted for conference proceedings, 2023 (not yet published).

Research Experience

Trace-to-Architecture: Capability Bottleneck Diagnosis for Harness Revision 2026 – present
First author
- Proposed T2A, a framework that uses execution trajectories to decide what to change in an LLM agent's harness when it fails, and when those changes should apply.
- Built tooling that groups trajectories by observable features, letting a development agent diagnose failures with evidence from both successful and failed tasks.
- Designed validation that checks not only whether target tasks improve, but also whether selected successful tasks stay successful and whether the edits are actually triggered.
- Across ALFWorld, ScienceWorld, and AppWorld, achieved the highest aggregate score for all three task agents, exceeding the strongest baselines by 6.2–30.3 points; integrating T2A's diagnosis and validation into Meta-Harness raised its mean ScienceWorld score by 21.6 points.

Institute of Microelectronics, Chinese Academy of Sciences Beijing, China
Research Intern *Jul 2024 – Aug 2025*
- Studied automatic evaluation of text-to-image generation (CLIPScore, VQAScore, BLIP-2), focusing on how well metrics capture spatial relations between objects.
- Explored a 3D-aware evaluation dimension: recovered scene structure with monocular 3D reconstruction and fed text, image, and 3D tokens jointly into a language model to assess spatial orientation and agent–patient interactions.
- Reproduced and deployed vision and generation models (VGG16/19, YOLOv5, Omost) in PyTorch.

Introduction to VLSI Research Program Remote
Supervised by Prof. Dejan Marković, UCLA *Jul 2023 – Aug 2023*
- Led a student team; designed, built, and tested most of the circuits; wrote the final report and gave the oral presentation.

Nanoelectronics, Optoelectronics and AI Research Seminar Remote
Supervised by Prof. Deep Jariwala, University of Pennsylvania *Feb 2023 – Apr 2023*
- Studied nanoscale devices, nanofabrication, and low-dimensional semiconductors for AI hardware; led weekly team assignments, gave the oral presentation, and wrote the PeLED design sections that became publication [3].

Awards

Second Prize Scholarship, Jilin University 2022
Yan Jici Scholarship, Institute of Physics, Chinese Academy of Sciences 2021
Third Prize Scholarship, Jilin University 2020

Skills

Programming: Python, PyTorch, C, LaTeX **Languages:** Chinese (native), English (fluent)
